Professional Summary

Data Architect with 16+ years of experience designing enterprise-scale data platforms in banking and financial services. Currently leading architecture and standardisation of a cloud-native data platform on GCP for a major UK bank. Deep expertise in Medallion architecture, data governance, real-time streaming, and regulated-environment delivery. Proven track record of defining architecture standards, enabling domain onboarding, and building secure, scalable data ecosystems — increasingly focused on AI-ready platform design, MLOps, and responsible AI governance in regulated environments.

Key Achievements

- Designed and implemented enterprise-wide Medallion (Bronze–Silver–Gold) architecture adopted across multiple data domains at a UK bank.
- Onboarded 6+ business domains onto a centralised GCP data platform, accelerating delivery through reusable frameworks and accelerators.
- Established data governance and quality framework using Dataplex and Ataccama, improving data lineage, compliance, and auditability.
- Delivered real-time data ingestion architecture using Pub/Sub and Kafka, enabling near real-time analytics across enterprise domains.
- Led Hadoop-to-GCP and Teradata-to-BigQuery cloud migrations, reducing infrastructure costs and modernising legacy data estates.

Core Skills

Cloud & Platforms: GCP (BigQuery, Dataflow, Dataplex, Pub/Sub, GCS), Hadoop, Oracle

Data Engineering: Apache Beam, Apache Spark / PySpark, DBT, Airflow, Kafka, Pub/Sub, Streaming & Batch Processing

Architecture: Medallion Architecture, Lakehouse, Data Modelling, Data Governance, Data Quality, Medallion, Real-Time Ingestion, Collibra, data lineage.

AI/ML & GenAI: Vertex AI (Pipelines, Feature Store, Endpoints), RAG Architecture, Vector Databases (BigQuery Vector Search, AlloyDB pgvector), LLM Integration, MLOps, Feature Engineering, Model Governance, Responsible AI, LangChain

DevOps & Tooling: Terraform, Kubernetes, Docker, Ataccama, Python, SQL, PL/SQL

Professional Experience

Lloyds Banking Group (via TCS) | Data Architect

February 2026 – Present

Location: Birmingham, United Kingdom

Technologies: GCP (Dataflow, BigQuery, Dataplex), Apache Beam, PySpark, DBT, Ataccama, Pub/Sub, Kafka, Kubernetes, Terraform

Lead architect within the central Data Engineering Capability Team, driving design and standardisation of a cloud-native enterprise data platform on GCP for a regulated UK banking environment.

- Defined target-state architecture and enterprise data standards across ingestion, transformation, and consumption layers.
- Designed and implemented Medallion (Bronze–Silver–Gold) architecture data products for enterprise-wide adoption across 6+ business domains.
- Established lakehouse architecture on BigQuery, ensuring structured data progression, auditability, and compliance.
- Defined data governance and quality framework using Dataplex and Ataccama, improving lineage tracking and regulatory compliance.
- Architected batch and streaming data pipelines using Apache Beam and Dataflow, supporting both real-time and scheduled processing.
- Defined real-time ingestion architecture using Pub/Sub, Kafka, and Kubernetes for near real-time analytics delivery.
- Established Infrastructure-as-Code standards using Terraform, enabling scalable and repeatable platform provisioning.
- Conducted architecture reviews and provided technical leadership across cross-functional engineering teams.
- Designed data platform architecture to support AI/ML workloads, establishing feature engineering layers on BigQuery Gold tier to serve model training and inference pipelines.
- Defined AI governance and model risk framework aligned with FCA/PRA regulatory guidance, extending existing Dataplex lineage controls to cover ML model metadata, versioning, and audit trails.
- Architected real-time streaming infrastructure (Pub/Sub, Kafka) to support online ML inference use cases including transaction anomaly detection and fraud scoring.
- Evaluated and prototyped RAG (Retrieval-Augmented Generation) architecture using BigQuery Vector Search and Vertex AI to enable LLM-powered access to enterprise knowledge assets.

TCS, Pune | Data Engineer (Lead)

July 2024 – January 2026

Location: Pune, India

Technologies: *Apache Beam, PySpark, GCP, Dataflow, BigQuery, DBT, Dataplex, Ataccama, Pub/Sub, Kafka, Kubernetes, Terraform*

Served as Lead Data Engineer within the Data Engineering Capability Team for a UK-based banking client, building reusable frameworks and platform accelerators to speed up delivery across business domains.

- Designed and developed batch and streaming pipelines using Apache Beam, PySpark, and Dataflow.
- Implemented data transformation and modelling workflows using BigQuery and DBT.
- Supported data quality, governance, and ingestion frameworks using Dataplex, Ataccama, and Pub/Sub.
- Built reusable platform components and accelerators to reduce onboarding time for new business domains.

Accenture Technologies | Associate – Data Manager

February 2022 – June 2024

Location: Pune, India

Technologies: *GCP, Python, Airflow, Docker, PySpark, BigQuery, Pub/Sub, Hadoop*

Led Hadoop-to-GCP cloud migration for a US cards and payments bank, developing scalable utilities and orchestration frameworks.

- Built Python-based orchestration framework (Lumi-SDK) enabling dynamic workflows, cross-project execution, and resource tracking.
- Developed data movement and ingestion utilities supporting multiple formats (Parquet, CSV, Audio) with encryption and PII protection.
- Enabled local development environments using GCP emulators and Docker-based Airflow, improving debugging and testing efficiency.
- Enhanced data governance, developer experience, and cloud resource utilisation across enterprise data pipelines.

HCL Technologies | Consultant – Data Architect

June 2021 – February 2022

Location: Pune, India

Technologies: *Teradata, BigQuery, PySpark, GCS*

- Led Teradata-to-BigQuery migration, modernising legacy data infrastructure for a leading UK bank.
- Designed historical data migration frameworks using PySpark and GCS with optimised loading strategies.
- Produced architecture documentation and stakeholder adoption guidelines.

Atos-Syntel | Consultant / Team Lead

January 2015 – June 2021

Location: Glasgow, United Kingdom

Technologies: *GCP, Hadoop, Python*

- Delivered cloud migration proofs-of-concept and enterprise data platform solutions using GCP and the Hadoop ecosystem.
- Provided architecture consulting and pre-sales support including cost modelling and solution design.
- Led an 8-person UK team delivering enterprise application enhancements and deployment automation.
- Built Python-based automation tools to improve operational efficiency and reduce manual deployment effort.

Syntel Pvt. Ltd. | Software Engineer

March 2010 – January 2015

Location: Pune, India

Technologies: *Oracle, SQL, PL/SQL, Linux*

- Developed and maintained financial data applications using SQL, PL/SQL, and scripting languages.
- Delivered enhancements improving data accuracy, stability, and reconciliation processes across banking systems.

Certifications

- **Google Cloud Professional Cloud Architect** — Google (*Valid until Feb 2026*)
- **Google Cloud Professional Data Engineer** — Google (*Certified Jan 2021, Recertified Mar 2023*)
- **Google Cloud Associate Data Engineer** — Google (*Dec 2022*)
- **Databricks Certified Data Engineer Associate** — Databricks Academy (*Apr 2023*)
- **Generative AI Leader Certification** — Google (*Valid until Nov 2025*)
- **Oracle Autonomous Database Cloud 2019 Certified Specialist** — Oracle (*Jul 2020*)
- **Oracle Cloud Infrastructure Developer 2020 Certified Associate** — Oracle (*Aug 2020*)
- **Google Professional Machine Learning Engineer** — Google (*target: Q3 2026*)

Education

Bachelor of Engineering (Computer Science) — Solapur University, Solapur | Graduated: 2009
